UND OBERFLÄCHENBEHANDLUNG

Dr.-Ing. Dr. rer. nat. Magnus Buhler

Electropolishing

**Electrolytic brightening, smoothing and deburring
of stainless steel, steel, brass, copper, aluminium,
titanium and magnesium**

1st edition

Content

1	Introduction	11
2	Removal Process	13
2.1	Characteristics of the removal process	13
2.2	Electrochemical Reactions.....	13
2.2.1	Anodic Reactions.....	13
2.2.1.1	Classical idea of metal removal	13
2.2.1.2	Stainless Steel and Steel.....	14
2.2.1.3	Brass and copper	15
2.2.1.4	Aluminium.....	15
2.2.1.5	Magnesium.....	15
2.2.1.6	Titanium.....	15
2.2.1.7	Oxygen evolution under transpassive conditions	15
2.2.2	Cathode reactions	17
2.2.2.1	Hydrogen formation.....	18
2.2.2.2	Metal deposition.....	18
2.2.3	Charge transport in the electrolyte.....	18
2.3	Removal mechanism	19
2.3.1	Transport limitation	19
2.3.2	Dynamic behaviour of the removal process.....	20
2.3.3	Development of oxygen bubbles.....	21
2.3.3.1	Videos take of a Hull cell anode during electropolishing	24
2.3.3.2	Observation of the electropolishing process in a Hull cell with rotating cylindrical electrode	27
2.4	About electropolishing.....	30
2.5	Relationship between removal and amount of current	33
2.6	Patterning during electropolishing.....	35

2.7	Pros and cons of electropolishing.....	37
2.8	Examples for use of electropolished pieces or devices	39
3	Influence of different manufacturing parameters during electropolishing	49
3.1	Manufacturing process.....	49
3.2	Influence of different process parameters	52
3.2.1	Classification of the different parameters	52
3.2.2	Preparation of the workpiece	53
3.2.2.1	Cleaning of the surface	53
3.2.2.2	Mechanical and electrochemical pre-treatment	54
3.2.2.3	Preparation of weld seams for electropolishing	57
3.2.3	Electrolyte composition.....	58
3.2.4	Ageing of the electrolyte.....	60
3.2.5	Influence of electropolishing time	63
3.2.5.1	Dependence of removal on electropolishing time.....	63
3.2.5.2	Micro-roughness versus removal time	64
3.2.6	Temperature of the electrolyte	67
3.2.7	Current and current density	69
3.2.8	Advantage of the use of pulsed current	71
3.2.9	Position of the surfaces to be removed or electropolished.....	75
3.2.9.1	Impression.....	75
3.2.9.2	Influence of sample position on the gloss value.....	77
3.2.9.3	Influence of the workpiece position on the surface roughness.....	79
3.2.10	Forced convection.....	81
3.2.11	Influence of the alloy composition.....	83
3.2.11.1	Influence of carbon content of stainless steel.....	83
3.2.11.2	Influence of nickel content during electropolishing of stainless steel	85
3.2.11.3	Influence of the molybdenum content on electropolishing of stainless steels.....	86
3.2.12	Influence of the structure of stainless steel on electropolishing	87
3.2.12.1	Influence on the removal speed.....	88
3.2.12.2	Influence on gloss value and roughness	90
4	Optimisation of removal results	91
4.1	Parameter variation	91
4.2	Usage of Hull cells.....	92

5	Electrolytes used for electropolishing	98
5.1	Electrolytes for steel and stainless steel	98
5.2	Brass and copper – phosphoric acid and alcohols	98
5.3	Aluminium and mixtures of sulphuric and phosphoric acid	99
5.4	Magnesium electrolyte	99
5.5	Electrolytes used for electropolishing of titanium	100
6	Selected manufacturing results	102
6.1	Investigations on stainless steel	102
6.1.1	Influence of the electrolyte mixture on electropolishing of stainless steel	102
6.1.2	Depth of removal and removal speed in case of electropolishing of stainless steel	104
6.1.3	Roughness on the micro-scale during electropolishing of stainless steel	106
6.1.4	Gloss value of electropolished stainless steel	107
6.2	Special variations of the manufacturing process	108
6.2.1	Electropolishing of stainless steel weld seams	108
6.2.2	Electropolishing of stainless steel with pulsed current	108
6.2.3	Micro-electropolishing of stainless steel	109
6.3	About electropolishing of steel	111
6.3.1	Gloss value of electropolished steel.....	112
6.3.2	Corrosion protection of electropolished steel	114
6.4	Electropolishing of brass and copper	114
6.4.1	Influence of different alcohols on the roughness of electropolished brass	114
6.4.2	Removal of brass.....	115
6.4.3	Gloss value and nano-roughness of electropolished brass surfaces.....	116
6.5	Some results on electropolishing of aluminium	117
6.5.1	The importance of a short time between electropolishing and rinsing	117
6.5.2	Roughness of electropolished aluminium surfaces.....	119
6.5.3	Gloss value of electropolished aluminium.....	121
6.6	Electropolishing of magnesium.....	123
6.7	Electropolishing of titanium.....	124
6.7.1	Removal during electropolishing of titanium	124
6.7.2	Roughness of electropolished titanium.....	125

7	Remarks with respect to job safety and environmental efforts.....	127
8	Acknowledgement	128
9	Literature.....	129
10	Appendix.....	134
	10.1 Definition of used roughness parameters	134
	10.2 Measurement of the gloss value	135
	10.3 Abbreviation.....	137
	Index.....	138
